

Getting started – invoke a tool in TRMS (<http://ecolleg.org/trms/>)

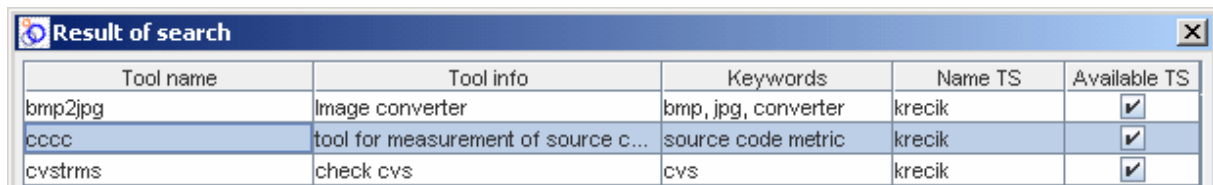

- 1) If you are logged in TRMS then go to ‘Tool/Task’ menu and select ‘Show’ item

- 2) Put search criteria for a tool (if the fields are empty then all tools will be shown)

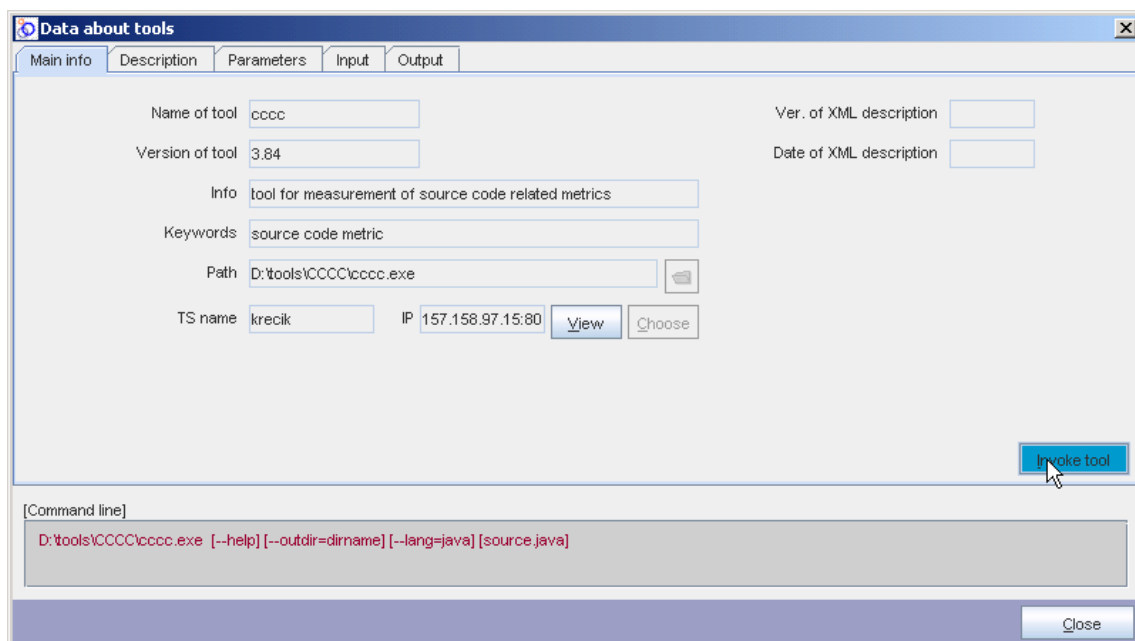

A screenshot of the "Tool search criteria" dialog box. It has a title bar with the text "Tool search criteria". Below the title bar, there are two text input fields: "Name" and "Keywords". At the bottom of the dialog, there is a radio button labeled "Tool" which is selected.

- 3) Select the required tool if it is available (i.e. cccc)

Tool name	Tool info	Keywords	Name TS	Available TS
bmp2jpg	Image converter	bmp, jpg, converter	krecik	<input checked="" type="checkbox"/>
cccc	tool for measurement of source c...	source code metric	krecik	<input checked="" type="checkbox"/>
cvstrms	check cvs	cvs	krecik	<input checked="" type="checkbox"/>

- 4) Check detailed information about the selected tool and start invoke dialog box by clicking on the ‘Invoke tool’ button

Data about tools

Main info | Description | Parameters | Input | Output

Name of tool: Ver. of XML description:

Version of tool: Date of XML description:

Info:

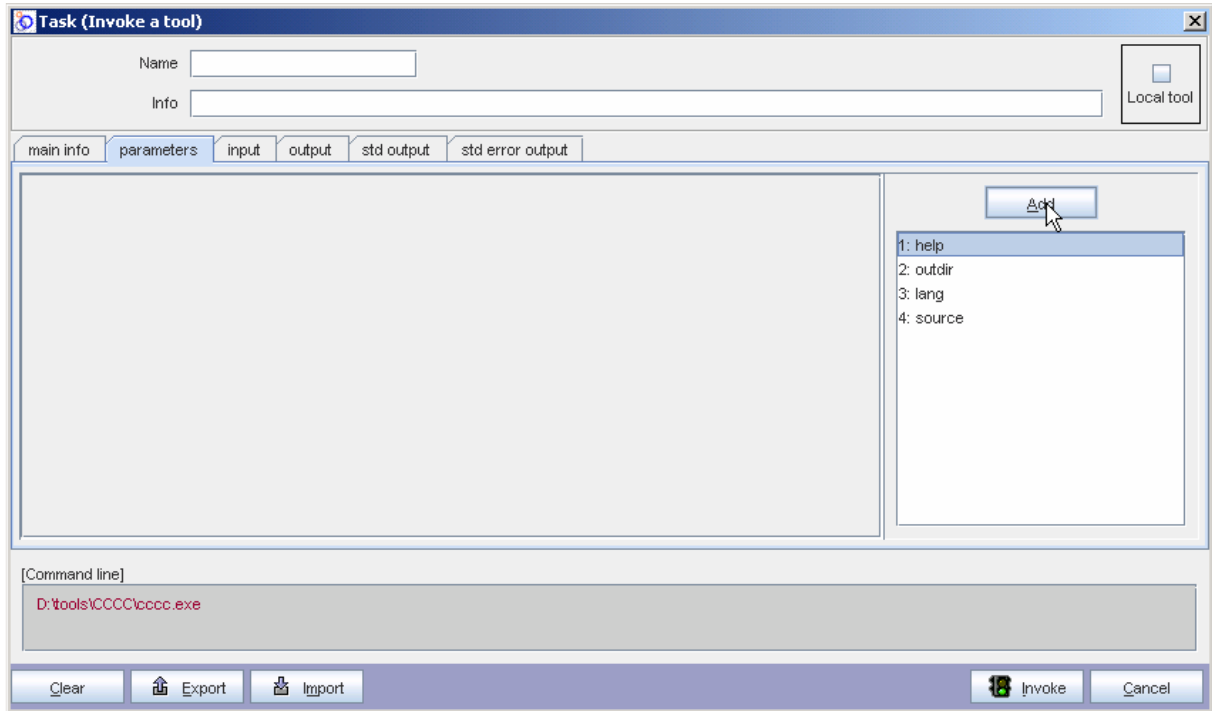

Keywords:

Path:

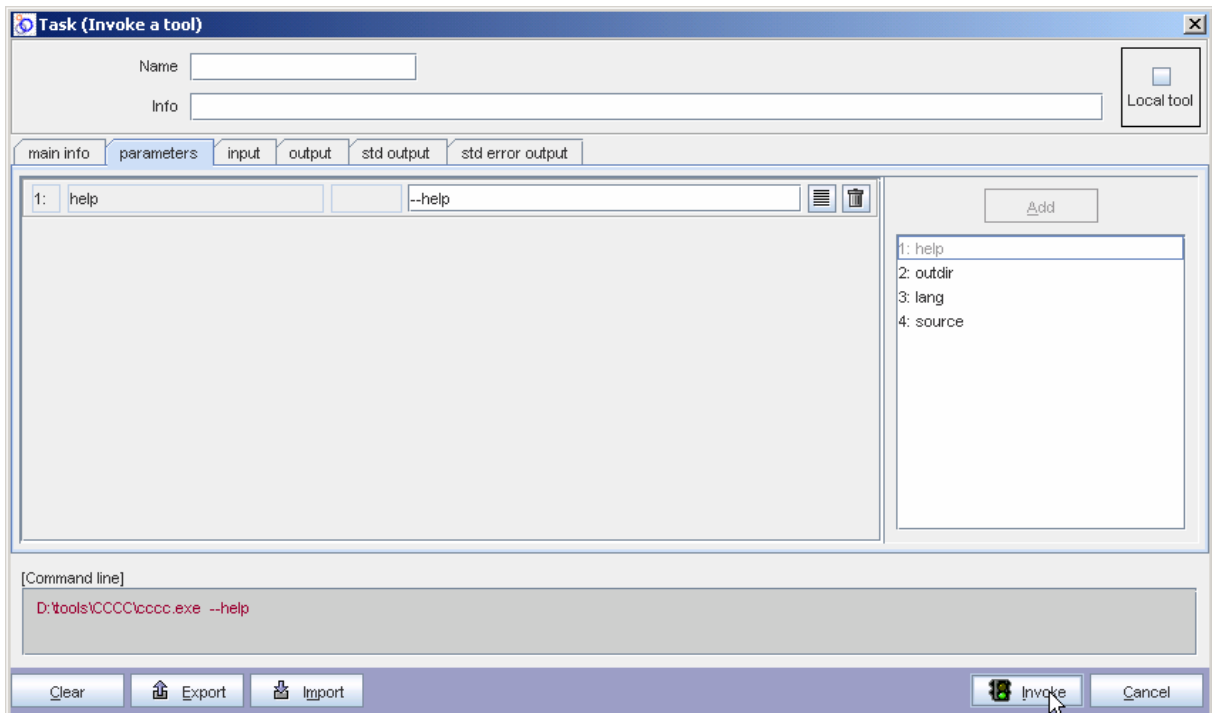

TS name: IP:

[Command line]
D:\tools\CCCC\cccc.exe [--help] [--outdir=dirname] [--lang=java] [source.java]

5) Go to the 'parameter' tab and add required parameter to invoke a tool (i.e. help)

6) You are now ready to submit the invoke to the tool server

7) Check results of the invocation in 'std output' tab
